

Hoftrac®

**WEIDEMANN**  
*designed for work*

**The multifunctional Hoftracs®.**  
Powerful helper for every application.

## Your personal Hoftrac®.

Compact design, low centre of gravity, tight turning radius, and a powerful performance – these features have characterised the Hoftrac® series for years and still determine the immense success of our machines.

Our basic models offer you the starting basis for the tailored-to-suit outfitting of your machine. With the lower priced entry models, you receive the ability to freely configure your machine: Choose from among the numerous options the ones you need for your application. You can thus be sure that your machine completely meets your individual needs. And the best thing about the Hoftrac® concept: with our series, you only pay for what you really need.

# Compact and manoeuvrable Hoftracs®.

Tailored equipment and raw power.

A feel-good working area.  
More on pages 12 – 15

Efficient tool change.  
More on page 7

Easy serviceability with  
the laterally tiltable operator's cabin.  
More on page 11

Excellent corrosion protection  
through powder-coating  
More on page 22

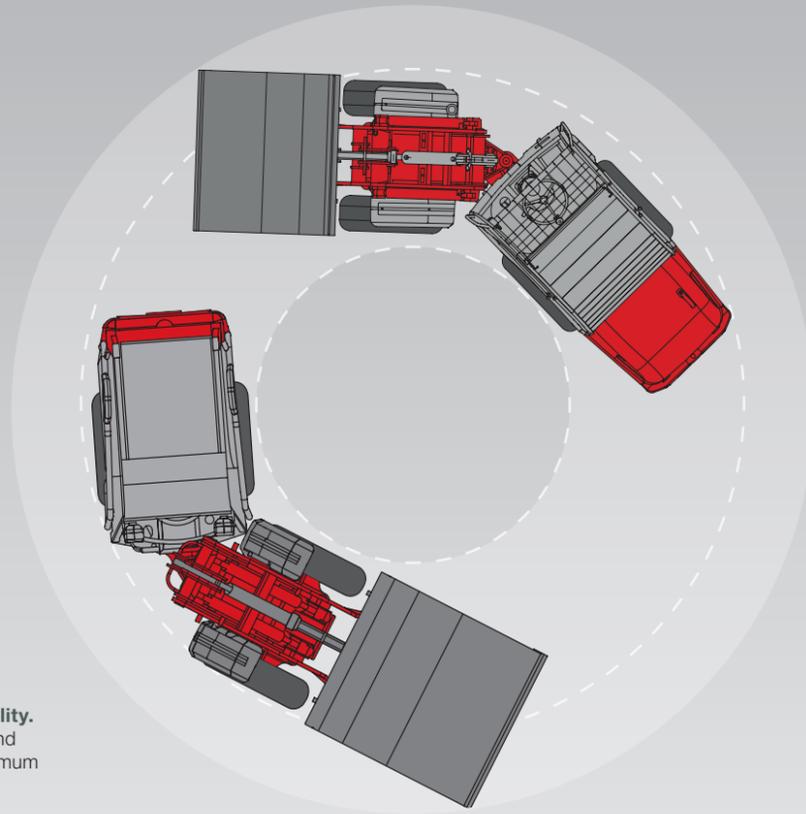

Flexible selectable driving positions.  
More on page 8

Road capability with  
articulated pendulum joint.  
More on page 6.

## The basic Weidemann virtues.

Agile, multi-functional, and suitable for all terrains.

**Compact machines with a high level of manoeuvrability.** Especially when things become tight, e.g. work in stables and storage areas, our Hoftracs® feature a small radius and optimum manoeuvrability.

**A multi-tool for various applications.** Regardless of whether you are feeding, mucking out, sweeping, stacking, or transporting: thanks to the enormous variety of different attachments, your Weidemann Hoftrac® becomes a universal multi-tool. You can find more about this on pages 24-27.

**The backbone of the Weidemann design: the legendary articulated pendulum joint.** Weidemann Hoftracs® always run with all four wheels on the ground – in any situation and in any ground conditions. Because the front and rear carriage can oscillate self-contained of each other, they react sensitively to every unevenness. The benefits: you always drive with maximum traction; no power is wasted.

**Variety in the outfitting.** The Weidemann Hoftracs® feature comprehensive and sturdy standard equipment. Depending on application and preferences, the engine, drive, operator's cabin, and hydraulics can be individually configured. Your Weidemann is always custom-made. A selection of the standard equipment and options available can be found on pages 28–29 and at [www.weidemann.de](http://www.weidemann.de).

**Efficiently change attachments.** Thanks to the hydraulic quick-change system, attachments can be readily exchanged. Your Weidemann machine is therefore always ready for use. This increases productivity and profitability.

## Choose your operator's cab.

Smart solutions for all operating conditions.

### Safe operator's canopy with restraint system.

Maximum safety that is state of the art. As a standard, Weidemann installs an operator's canopy with a restraint system on all Hoftrac® models. The operator's canopy and the restraint system for the operator meet the current European machine directive (2006/42/EC) for ROPS and FOPS protection. Depending on the model, a front and rear window is available to protect the operator from inclement weather.

### Comfortable cabin.

The spacious cabin meets the current European machine directive (2006/42/EC) according to ROPS and FOPS protection and offers a great deal of headroom and freedom of movement. Thanks to the complete glazing, the operator has an outstanding overview of the attachment and the entire working area. Look on page 29 to see which models feature a cabin.

### 1240LP – Low Position.

The lower seating position of the operator allows for a lower overall height of the machine. Additional advantages: a machine centre of gravity near the ground and a comfortable step entry.

### Foldable operator's canopy eps (Easy Protection System).

Optionally, all Weidemann Hoftracs® (except the 1240LP and 1880) can be equipped with the folding eps operator's canopy. This also meets the current European machine directive (2006/42/EC) for roll-over protective structure and FOPS protection. With a few hand movements, the eps can be manually prepared for a low clearance height.

### Hydraulically lowerable operator's canopy epsPlus (Easy Protection System Plus).

The optionally available epsPlus is a hydraulically lowerable operator's canopy, which the operator can operate from his seat. It solves the problem of low clearance heights and considerably facilitates work. The epsPlus is a convenient solution with a tremendous time savings and high safety standards – available for the 1160, 1160e eHoftrac®, and 1260.

Awarded with:

## Economic efficiency that's worth it.

Efficient work operation thanks to reliable technology.

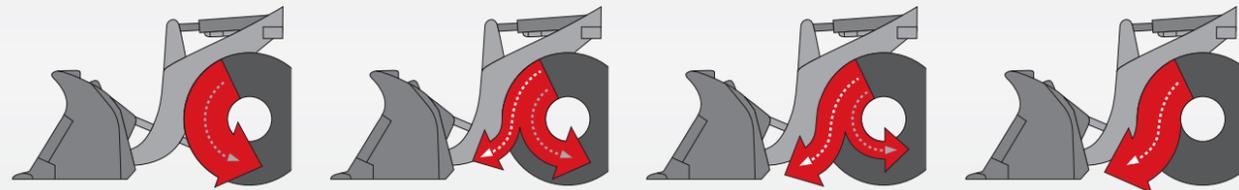

### Work economically.

Economic efficiency is currently one of the most important features that Hoftracs® should bring to your business. The faster and more time-saving a wheel loader can manoeuvre, the higher its performance. For the machines of Weidemann, economy means technically sophisticated solutions such as large lift height, strong tensile force, high stability, and an efficient quickhitch system for attachments.

### Connectible 100% differential lock.

The connectible 100% differential lock provides maximum traction and pushing power if necessary. It also keeps the tire wear low (switched off during normal operation). This increases the efficiency of your machine!

### The brake-inch pedal.

In Weidemann machines, the hydrostatic 4-wheel drive is combined with the brake pedal. Through the inching, this enables creeping until standstill. With the brake-inch pedal, it is possible to travel at millimetre precision in crawler gear at full engine speed while quickly lifting. If the pedal is pushed further, the machine will stop. The advantage of the

brake-inch pedal is the optimal distribution of the engine output. In addition, it is not possible to stall the machine.

### Optimum ease of servicing.

The models of the Hoftrac® series are equipped with a tiltable operator's cabin (exception 1240LP). This allows easy access to the engine, hydraulic system, and electronics. The checking and maintenance of the machine are facilitated significantly. The engine hood can be opened widely, thereby allowing for optimal access.

### Tremendous lifting and shearing forces thanks to the large-dimensioned hydraulic cylinders.

Weidemann always includes two strong lift cylinders on all Hoftracs®. This ensures that the load distribution is always optimally transferred to the load arm. In addition, the entire loader unit gains stability. The size of the hydraulic cylinder is always adapted to the size of the respective machine. This is gentle on both machine and material.

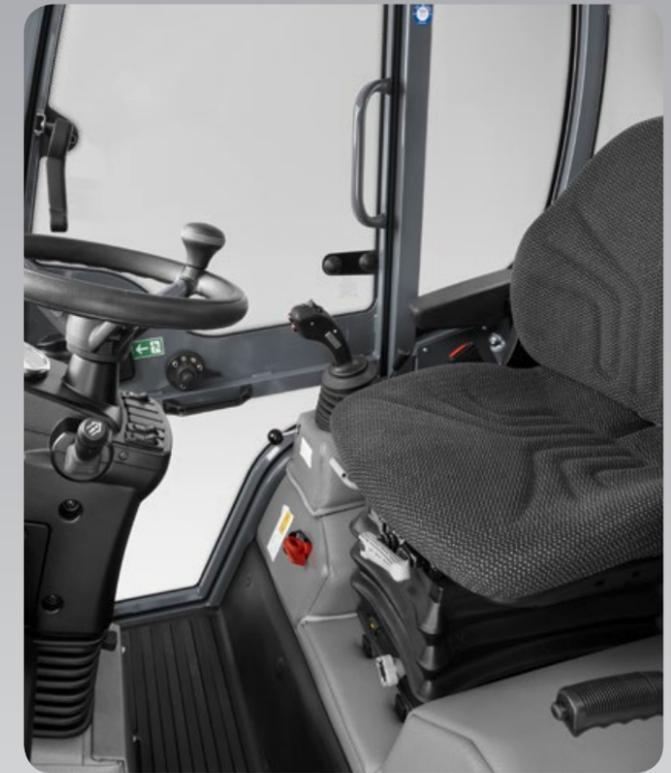

## High level of operating and driving comfort.

Optimal visibility and good working environment.

### Good all-round visibility.

The operator's canopy/cabin provides an excellent overview of the attachments, the immediate working area, and the entire machine surroundings.

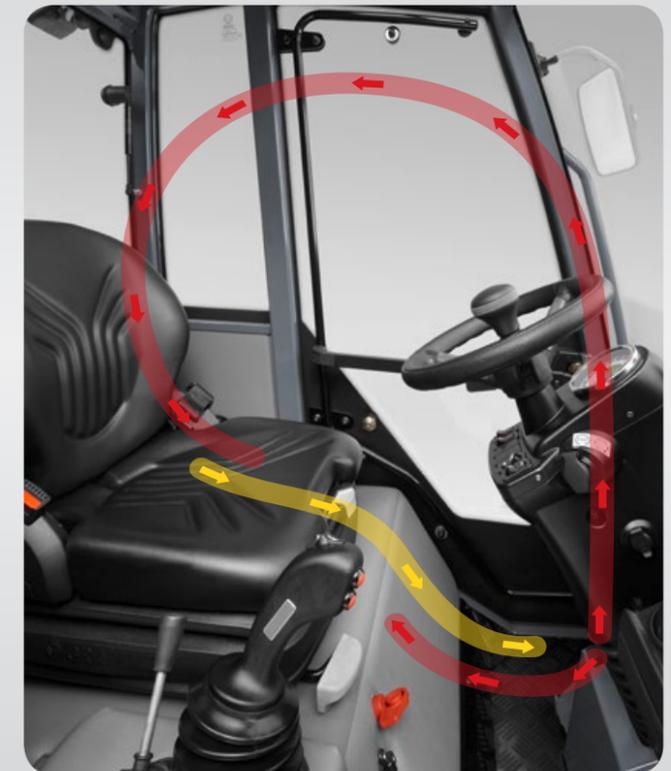

### Comfortable operator's seat.

The operator's seat is adjustable, ergonomically formed, and well suspended. The optional air-suspended comfort seat allows for fatigue-free work. The seats are heated for working in cold conditions.

### Ventilation as required.

The cabins feature large, wide-opening doors on both sides. Depending on the cabin type, the upper window can be folded up completely and locked. A gap ventilation is also possible.

### Comfortable working environment.

An excellent working environment thanks to an efficiently working heating and ventilation system featuring a blower, fresh air filter, and well-placed air nozzles. In warm temperatures, an air-conditioning system is recommended (available for 1880).

## A motivating working area.

Ergonomic operator's controls and simple handling.

### Tested and operator-friendly – the Joystick for the Hoftrac® series.

The whole machine is in your hand with the multifunction lever or joystick. Sturdy and sensitive control for all lifting and lowering motions as well as tilting the tool in and out with just one lever. Depending on the machine type, the joystick can be supplemented with additional functions.

### The joystick for the 1880.

The joystick becomes an all-rounder, thereby increasing the machine's ease of use. In addition to the functioning of the 3rd proportional control circuit that can be activated via the joystick, the continuous operation of the 3rd control circuit can be activated via the rocker switch – by moving the thumb wheel (also in both directions).

The optional function of the 4th control circuit can also be operated proportionally via the joystick. Both electrical functions can also be operated on the joystick in a detenting or latching manner. Both electric functions are independent so that they can be individually configured by the operator.

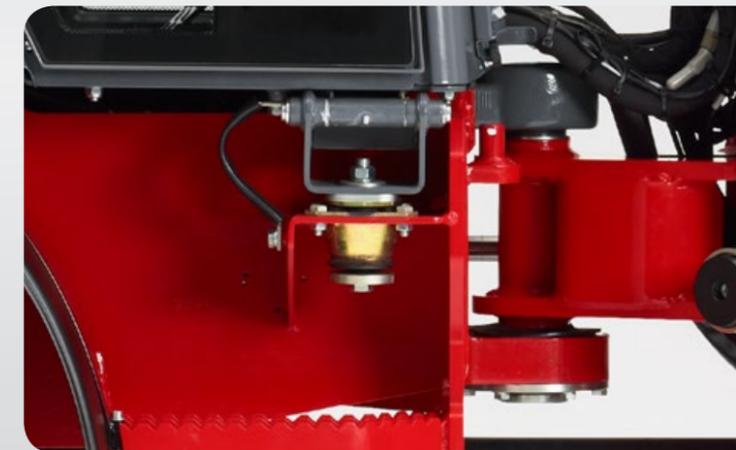

### Adjustable steering column.

Thanks to the adjustable steering column, you can adjust the operator's cab to your physical dimensions. By adjusting the various operator's controls, you can achieve a completely ergonomic working area.

### The main functions always in sight.

Thanks to the digital display, you have a good overview of your machine. In addition to temperature, tank filling, or operating hours, active functions (e.g. electrical functions, the continuous operation of the 3rd control circuit or the activated differential lock) are displayed in the cockpit (varies depending on the machine type).

### Vibration-damped working area.

Vibrations and impacts are absorbed by the machine. Your body is protected, and you can work longer in a much more relaxed and focused manner.

# The new eHoftrac®

Original Hoftrac. 100% electric.

## Original Hoftrac®: the indispensable multi-tool.

A compact and sturdy design, low centre of gravity, small turning radius, powerful performance and a variety of attachments – these features identify our Hoftrac® and still determine its great success. The new 1160 eHoftrac® combines the advantages of the traditional Hoftrac® with the drive type of the future.

## 100 % electric: technology that excites.

A lead-acid battery drives the eHoftrac® to peak performances – and only requires an electrical connection with 230 V to do so. Two separate electric motors are used in the machine: one for the drive and one for the drive system of the work hydraulics. This minimises the power consumption because the power is only drawn when it is really needed. The electric motor for the drive also allows a dynamic and powerful start-up of the machine. This can be felt in every acceleration process.

## The new eHoftrac®.

The innovation for your business.

The machines of the 11 and 12 series are usually deployed for several hours of stable work in early mornings and late evenings. The traditional 1160 series Hoftrac® was used by Weidemann as the first fully electric eHoftrac®. One battery charge suffices for a work operation of 2–5 h, depending on the application conditions. This working duration is quite sufficient for machines in such a performance category under normal conditions. The concept of the eHoftrac® is based on a time-tested large-scale technology from materials handling equipment.

**The frequency inverter** converts direct current from the battery into a 3-phase AC, which is required from both electric motors.

**The power-break contactor** is the main relay. It switches the electrical connection link between the battery and the consumers.

**The control unit** controls the drive system and the work hydraulics.

**The battery** provides the necessary energy for both electric motors.

# eHoftrac®

The 1160 eHoftrac® has received multiple international awards:

Eima  
Innovation award 2014  
Italy

Agra  
Innovation award 2015  
Bulgaria

Equitana  
Innovation award 2015  
Germany

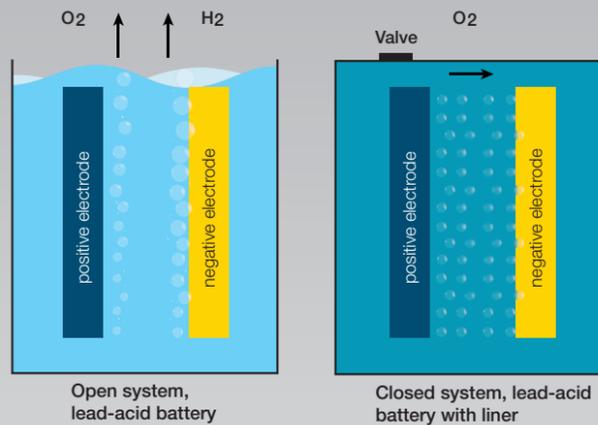

demo park  
Innovation award 2015  
Germany

# Impressive battery technology.

Efficient work with AGM technology.

## The advantages of the new AGM battery in the 1160 eHoftrac®:

- Improved efficiency and better power output with the same capacity
- Leak-proof system thanks to closed battery cells
- Refilling of distilled water is no longer necessary
- On-board battery charger, charging on a normal plug receptacle with 230 V
- Intermediate charging increases the efficiency of the battery
- More safety during charging (up to 75 % less gas formation)
- Increased recuperation capacity (energy recovery)
- Low temperature sensitivity (outside temperature)
- Negligible heat generation during operation

## AGM = Absorbent Glass Mat.

AGM technology describes the design of a sealed, maintenance-free lead battery with internal gas recombination. In order to ensure the internal recombination of oxygen gas and hydrogen ions into water, it is necessary to direct oxygen gas generated during charging directly to the negative electrode. In closed battery cells, this movement is almost completely prevented by the liquid

electrolyte because of the differences in density. In closed batteries, the quick transport of gas is achieved through non-woven mats (AGM or absorbent glass mat). Smaller pores are thereby wetted by the electrolyte and the larger pores are available for gas transport. For the 1160 eHoftrac® two different batteries are available – one with 48 V and 240 Ah as well as a more powerful one with 48 V and 310 Ah.

eHoftrac®

## Environmental friendliness that pays off in the long run.

A comparison of the operating costs over the average service life of the machine indicates that the costs for the diesel drive are significantly higher than those of the eHoftrac®. Included here were the energy and service costs as well as the battery replacement for the eHoftrac® about every 2,500 operating hours.

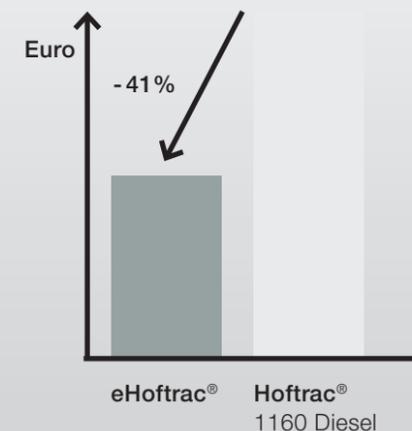

machine of equal power. This will pay for itself after about 2,800 operating hours. Emission values are reduced by around 43% by the eHoftrac®, thereby documenting its environmental friendliness. If you add the energy generation and energy consumption from your own PV unit to this, this would result in considerably more positive effects.

It can be said that the increased investment costs for the eHoftrac® are about 20% when compared with a

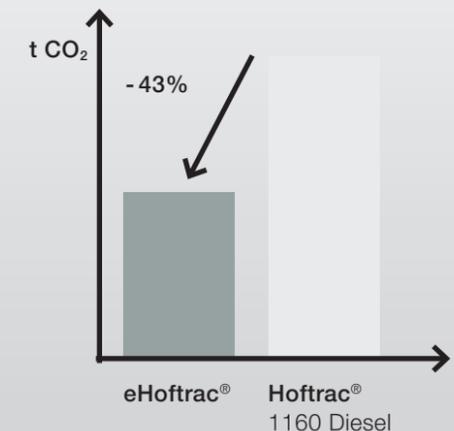

Contact your Weidemann dealer to find out about the costs for you and your business.

Operating costs over the service life of the machine

CO<sub>2</sub>-emission over lifetime of the machine

## Our quality promise.

Weidemann offers true German-made quality.

At Weidemann, quality is not an empty promise. A true Weidemann comes from one of the most modern wheel and telehandler production facilities in Europe. The plant in Korbach guarantees a consistently high quality of our products. At Weidemann, quality begins early on because compliance with defined processes is taken seriously. Purchased parts supplied to production are continually monitored, tested, and optimised in co-operation with suppliers.

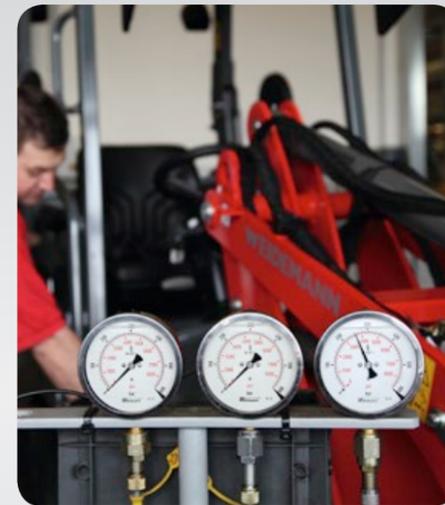

### Powder-coating.

The powder-coating is another key feature of the special quality standard at Weidemann. This guarantees optimum protection against corrosion. In comparison to conventional wet painting, it greatly extends the service life of the machine. It is also more efficient and environmentally friendly.

### Careful final inspection.

Every Weidemann that leaves our plant is subjected to a careful final inspection. This guarantees our customers a long service life and low operating costs from the onset. The Weidemann label means quality.

### DIN EN ISO 9001.

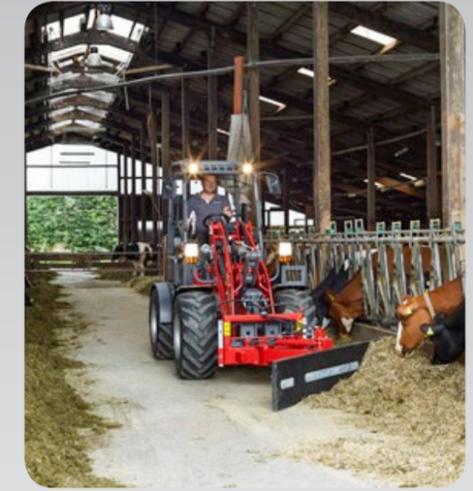

This standard is recognised internationally. With a certified system in accordance with international standard ISO 9001, Weidemann ensures that a focus on quality is reflected in all thoughts and actions within the company and that customers receive machines of certified quality.

# Weidemann Hoftracs®.

Unbeatable in daily application.

# No two Hoftracs® are the same.

Just put your machines together...

It's not a multitude of models that decides which problem solutions are optimal but rather the individual machine equipment for each area of use.

Our basic model, the Hoftrac® series, offers you an economical entry model. In addition, there is an LP-Hoftrac with a particularly low overall height.

Simply choose from our options tailored to suit your needs and assemble your Hoftrac® machine according to your tasks and operational requirements.

And the best thing about the Hoftrac® concept: you only pay for the configuration of your individual machine (i.e. only what you really need).

On the following pages, you will find the standard equipment and options as well as technical data and dimensions for our Hoftrac® series.

# Tread.

**EM tread**  
Thanks to the almost parallel lamellas, the EM tread is particularly well suited for loose ground such as sand, soil or coarse gravel. Thanks to the high thrust transmission, this tyre has a large footprint and runs very smoothly on the road.

**AS tread**  
The tapered lamellas provide for safe driving, especially on heavily contaminated terrain.

**SureTrax tread**  
The SureTrax tread features a large footprint and high lift capacity. Ideally suited for fortified and other hard surfaces.

**RP tread**  
Thanks to the large contact are, the ground is traversed gently. This makes the RP tread particularly well suited for application on lawns.

**MPT tread**  
The MPT profile offers the perfect combination of good traction on uneven ground conditions as well as fast road crossings.

**Multi-use**  
The multi-use tread was specially designed for year-round use and various climate conditions. In summer, it provides good traction on loose surfaces. In winter, it offers stability on snow and slippery driving surfaces.

# Vibration characteristic values.

Typical operating conditions	Mean value			Standard deviation (s)		
	$1,4 \cdot a_{w,eqx}$ [m/s <sup>2</sup> ]	$1,4 \cdot a_{w,eqy}$ [m/s <sup>2</sup> ]	$a_{w,eqz}$ [m/s <sup>2</sup> ]	$1,4 \cdot s_x$ [m/s <sup>2</sup> ]	$1,4 \cdot s_y$ [m/s <sup>2</sup> ]	$s_z$ [m/s <sup>2</sup> ]
<b>VIBRATIONS</b>						
<b>TYPE OF LOADING</b>						
<b>Compact wheel loader (operating weight &lt; 4,500 kg)</b>						
Load & carry (load and transport work)	0.94	0.86	0.65	0.27	0.29	0.13
<b>Wheel loader (operating weight &gt; 4,500 kg)</b>						
Load & carry (load and transport work)	0.84	0.81	0.52	0.23	0.20	0.14
Application in recovery (harsh application conditions)	1.27	0.79	0.81	0.47	0.31	0.47
Delivery drive	0.76	0.91	0.29	0.33	0.35	0.17
V-operation	0.99	0.84	0.54	0.29	0.32	0.14

## Whole-body vibrations:

- Each machine is equipped with an operator's seat that meets the requirements of EN ISO 7096:2000.
- When the loader is properly used, whole body vibration varies from below 0.5 m/s<sup>2</sup> up to a short-term maximum value.
- To calculate the vibration values according to ISO/TR 25398:2006, it is recommended to use the values specified in the table. The actual application conditions are to be considered.

- Like wheel loaders, telehandlers are to be classified according to operating weight.

## Hand-arm vibrations:

- The hand-arm vibrations are no more than 2.5 m/s<sup>2</sup>.

# WEIDEMANN

*designed for work*

## Weidemann – a tradition of efficiency.

For decades, our mission has been to lighten the load of commercial agriculture by the mechanisation of stable and yard operations. This led to the design and development of the Hoftrac®, which has become a generic term for its own equipment category – the original comes from Weidemann. The close co-operation between the Weidemann developers and our users has repeatedly led to innovative concepts and a sophisticated product programme with high usability and mature technology.

We stand by this and continue to pursue our chosen path. Our customers benefit from high productivity, investment security and have a strong partner in Weidemann, who is always at their side. Our machines and services perform at a high level and bring daily pleasure through their work operation. Made precisely for this. Weidemann – designed for work.

## Weidemann – your strong partner.

All-round care.

### Comprehensive dealer network.

Weidemann has a wide network of select dealers in Germany and Europe. Each dealer is part of a well-organised system. In addition to consulting and selling new machines, our dealers are happy to provide you with reliable customer service and supply you with spare parts. Weidemann offers regular training for dealers so that your contact partners are always up to date.

### Attractive financing programme.

In Germany, Weidemann offers attractive options for financing or leasing machines thanks to various framework agreements. Weidemann distributors also offer various financing options at the international level. Get in touch with your local contact partner to find out about current conditions.

### Personal training and instruction.

When you decide to purchase a Weidemann machine, you will not be left in the dark. When the machine is handed over, you and your entire team will receive detailed instructions on the operation and maintenance of the machine. If you would like to know more, simply contact your dealer. He or she is just around the corner and will be happy to help without bureaucracy.

### Warranty extension.

Upon request, you can extend the warranty period of your machine up to 60 months or 5,000 operating hours.

# WEIDEMANN

*designed for work*

## The Weidemann product range.

### The multifunctional Hoftracs®.

Powerful helper for every application.  
Our innovation: the fully electric 1160 eHoftrac®.

### The powerful wheel loader.

Optionally available either with load arm or telescopic arm.

### The compact telehandler.

Aim high with optimal stability.

### Attachments and tyres.

Your Weidemann machine becomes a multi-tool!  
The optimal attachment and the right tyres for every task.

WM.EMEA.10252.V01.EN/02/2017
