BREATHTAKING FROM TOP TO BOTTOM

Want to share an inspiring view on a starry night? Need a cosy refuge on a chilly morning? X-TRAIL makes sure you're well taken care of.

To design their zero-gravity-inspired seats with spinal support, Nissan's engineers looked to the cosmos. They recreated the relaxed posture of astronauts floating in space by designing an articulated front seat that supports you from the pelvis to the chest optimising the blood flow, and seat cushions that provide better pressure distribution. The result is exceptional comfort and less fatigue on the long distance trips of your adventures.

More inspiration comes from the available Power Panoramic Sunroof, offering everyone aboard the most stunning theatre view of the sky and stars.

ADAPT TO RAIN OR SLEET IN THE BLINK OF AN EYE

The X-TRAIL can adapt to changing conditions 30 times faster than the blink of an eye. Whether it's snow, rain-covered pavement or a tight turn, the system will automatically send power to the wheels that need it the most. Even in ideal conditions, the X-TRAIL's All Wheel Drive system pays big dividends: getting a grip has never felt better.

STAND STILL ASSIST/AUTO HOLD. No rolling backwards. With Stand Still Assist, the feature will hold your X-Trail at a stationary position for up to 3 minutes, at which point the electric parking brake will be applied if there is no driver interaction. The feature works on all gradients. Only available on manual transmissions.

INTELLIGENT 4x4. With X-TRAIL's All-Mode 4x4-i, is a system that's capable on-road and off. You can choose full-time 2WD for maximum efficiency. Auto Mode constantly monitors conditions and adjusts the balance of power between front and rear.

INTELLIGENT POWER

GO FURTHER WITH A CLEAN CONSCIENCE

Looking for excellent fuel economy in a roomy crossover that's lots of fun to drive? That's what you get with X-TRAIL. From exterior aerodynamics that whisper through the wind to advanced engines and a virtually gearless XTRONIC transmission, it takes efficiency and performance to the next level.

Powering the new X-TRAIL are advanced 1.6 litre petrol, 1.6 litre diesel and 2.0 litre diesel engines. The 1.6 litre engines offer enhanced fuel economy and lower CO₂ emissions. The 2.0 litre diesel offers higher performance. The engine also features Nissan's automatic Start/Stop system, which shuts down the engine when temporarily not in use – at traffic lights for example – to save fuel, then smoothly and quickly restarts as you pull away.

In the latest version of XTRONIC (Continuously Variable Transmission), friction is reduced up to 40% and the ratio coverage is increased to greater than that of some 8-speed automatics. An Eco mode improves fuel economy at the touch of a switch. Combined with such smooth performance, it's like riding a continuous wave of power.

DPF FILTER

WHAT IS A DPF?

A **DIESEL PARTICULATE FILTER (DPF)** forms part of the vehicle's exhaust in order to limit the amount of soot particles contained within the exhaust gas passing into the atmosphere.

When the amount of soot in the filter reaches a specific level, this needs to be reduced in order to maintain the filter's function.

This reduction is called '**REGENERATION**' and is carried out by the vehicle's electronic control system which raises the exhaust gas temperatures during normal driving. If a vehicle requires frequent regeneration due to driving style, these high temperatures cause the engine oil to degrade more quickly.

However, from 2011 onwards Nissan vehicles were fitted with an **OIL CHANGE SUPERVISOR (OCS)** as well as a DPF to help monitor the condition of the oil and ensure the quality never falls below a minimum level.

WHAT IF I ONLY DRIVE SHORT JOURNEYS?

If the vehicle is only driven for short journeys, or at low speed, then it may not be possible for regeneration to occur. In this situation, the below warning lights will be illuminated on your dashboard.

Please refer to your Owner's Manual for further information.

After seeing these warning lights you need to drive, as soon as possible, above 40mph until the light goes out. This can take up to 30 minutes depending on the amount of soot collected in the filter.

WHAT IF I IGNORE THEM?

If you continue to drive at low speeds the exhaust gas temperatures cannot rise, so regeneration cannot occur. In this instance, a combination of the below warning lights will be illuminated on you dashboard.

In this case, and in order to protect the engine and DPF Filter, the vehicle will require '**SERVICE REGENERATION**' which can only be carried out by a workshop equipped with Nissan diagnostic equipment. You will need to go to your nearest Nissan dealer in case the oil and filter needs to be replaced.

As '**SERVICE REGENERATION**' is not a manufacturing fault, so the cost will **NOT** be covered under warranty.
